

NIRO

The Niro combines innovative technology with a stylish look and sturdy housing. This makes the Niro the ideal solution for secure storage and a real eye-catcher in many different settings, such as offices and changing rooms. Especially as you can choose between two operating modes: private and multi-user mode.

The lock series not only impresses with its timeless design, but also with its IP65 protection (protection against dust and water splashes). This means that the lock is also suitable for outdoor and wet areas and supports a longer durability.

BURG®

NIRO

Niro.Code

Thanks to the simple and intuitive operation via code entry, the Niro.Code is an uncomplicated locking system solution. The configuration is very simple via keypad and master code. The Niro.Code is the electronic furniture lock for a wide range of applications, e.g. for offices, fitness and wellness areas. It is also suitable for outdoor charging stations.

Features

Easy to retrofit

The Niro makes it easy to retrofit, e.g. to replace mechanical locks. In addition to the 16 mm x 19 mm standard installation hole, a fixing screw provides additional stability and sealing.

Flexibility

The locks can be adapted to the installation situation thanks to an adjustable washer behind the cam. This means that each lock is suitable for both right and left-hinged doors.

Mechanical master key

For maximum security, the Niro also offers the option of powerless mechanical opening via Masterkey.

IP65

Thanks to the sealing mat on the back of the lock, the Niro series conforms to the IP65 standard. This also allows it to be used outdoors, as it remains protected from the effects of dust and water influences.

Niro.RFID

The Niro.RFID is a real all-rounder thanks to its operation with proven RFID technology in the RFID standard MIFARE® Classic or MIFARE® DESFire® EV. Intelligent functions, such as occupancy identification with MIFARE® Classic, as well as the three authorization levels (master, manager and user) round off the performance package
